Aviaries, Cages and Breeding Boxes

Is MDF (Medium Density Fibre) OK to use to build a breeding box?

MDF can be dangerous to use if the correct safety precautions are not taken. MDF contains a substance called urea formaldehyde, which may be released from the material through cutting and sanding. Urea formaldehyde may cause irritation to the eyes and lungs. As Budgerigars have a habit of chewing, they can easily ingest this toxin, **therefore it is not safe to use.**
