One odourless but deadly fume that may occur in your home is carbon monoxide. To protect your health as well as your birds, scrupulously maintain your furnace, oven, stove, and other appliances that use fossil fuels such as natural gas. Contact your local utility company to find out if it offers free appliance checks for carbon monoxide. If you start to developing flu like symptoms or find yourself suffering from a constant headache or nausea, have a qualified technician check your appliances for possible carbon monoxide emissions.

Hidden Hazards: Fumes

Many fumes found in your home may be harmful to your bird's health. These include cleaning products, cigarettes, incense, potpourri, scented candles, and overheated non-stick cook-ware.

A good rule of thumb to follow is if you can smell it; don't use it around your bird.
