

Budgie Mutations

Standard Requirement, for a Violet Cobalt (Visual Violet)

Visual Violet

Cheek Patches

Body Colour

Tail Feather

Note: The aim is to have a violet bodycolour with as much red tinge as possible.
The mutation does not affect Cobalt.
A Violet Skyblue can look like a Normal Cobalt.
The violet form can be mixed with all other varieties.

[Return to the BFC Budgiepage](#)

The above colorations are a little too purple for a "real" budgie here is an example of a violet that is visually being shown on a Cobalt Bird. Violet is an added factor so it can be on any series (blue or green) and any be in combination of dark factors (sky, cobalt, mauve OR light green, green or olive)

Budgie Mutations

Ann aka Rainbow's Berry (Opaline, Dominant Pied Cobalt Violet)

Unique solution ID: #1188
